UltraShield

AR551 Security Roller Shutters

The UltraShield Security Shutter profile is a double walled cavity with PU foam injected during the roll forming process. This profile is available for use on openings up to 50% larger than our standard domestic profiles while maintaining the same level of strength and insulation qualities.

The Ultra Shield is a curved profile which uses a minimal head box size, making it an ideal substitute for garage doors or commercial door applications where room for roll up is limited. Available in multiple colours, the UltraShield has 2 profile lines on the convex side with a smooth finish on the concave.

Technical

- Control options: Manual - Strap or Winder
  Motorised – Battery or 240v
- Weight (per m^2): 3.4kg
- Maximum Curtain Width: 4200mm
