

# Vertical

## Vertical Blinds

Vertical blinds allow you total control over your level of heat and privacy while regulating just the right amount of light into your room.

The European designed tracking system adds an ultra-modern, sleek design to the blind and is well suited for both casual and formal areas of your home while still being a great option for commercial applications. The track also has a unique slat release

system to allow the blades to be moved left or right for easy window cleaning.

Vertical blinds are extremely versatile and ideal for larger expanses of glass. The blades can be easily stacked to the left or the right or used as a centre opening blind, depending on your needs.
